Forty years ago, China enacted the one-child policy, only recently relaxed. One unintended consequence is an enormous gender imbalance with 20 million more men of marriage age by 2020. For families with an only daughter, the parents push these girls to study, excel in college and careers as if they were sons. Now living in economically powerful China, enough of these women have decided to postpone or forego marriage to spawn the label: “leftovers.”

Part critique of China’s paternalistic ideals, part playful portrait of the romantic travails of China’s trailblazing women and their well-meaning parents, *Leftover in China* focuses on the lives of four individual women against a backdrop of colorful anecdotes, with hundreds of interviews, and rigorous historical and demographic research to show how these “leftovers” are the linchpin to China’s future.

*“Factory Girls” meet “Vagina Monologues” in this
fascinating narrative on China’s single women –
and why they could be the source of its economic future.*
